

Global Economics Comment: Supply Shocks from the War in Iran Are Mostly Limited to Energy

- We estimate that higher oil prices will lower global GDP by 0.3% and boost headline inflation by 0.5-0.6 over the next year (with a smaller 0.1-0.2pp boost to core inflation) based on our commodity team's updated oil forecasts. A similar surge in natural gas prices will lead to incremental price pressure and growth headwinds in Europe and Asia. Risks are skewed toward larger effects as long as the Strait of Hormuz remains closed.
- The recent selloff in front end rates signals an expectation that global central banks will be especially sensitive to inflation given the memory of post-pandemic supply disruptions and associated surge in inflation. While the size of the energy shock will likely prompt some caution (and we have accordingly delayed our forecast for cuts in several economies) a key difference from 2021-2022 is that the supply shock today appears narrowly concentrated in the energy sector. We highlight three reasons why impacts on non-energy supply will likely be less severe.
- First, non-energy trade with Gulf economies is limited, accounting for only 1% of global trade, with major DMs and EMs generally even less exposed.
- Second, although Gulf exporters account for a large share of global production for some chemical and metal products, it appears less likely that trade disruptions for these products will create severe bottlenecks that limit broader production. Current spot price increases for the most highly exposed chemicals and metals suggest only 0.1pp incremental upside to global headline inflation.
- Third, the problematic shipping disruptions from 2021-2022 appear less likely to repeat. Gulf economies are not major re-exporters of most products (aside from boats), non-tanker ocean shipping costs have actually ticked down since the start of the war, and the recent rise in airfreight prices (while notable) implies less than 5bp upside to global inflation.
- Taken together, our analysis suggests that the major risk to global supply and inflation is mostly confined to energy, which limits the risk that the large second-round inflation effects observed in 2021-2022 will re-emerge.

Supply Shocks from the War in Iran Are Mostly Limited to Energy

Our commodity team's recent [oil](#) and [gas](#) price forecast upgrades imply that the rise in energy prices due to the closure of the Strait of Hormuz will have a larger impact

on the global economy. Our standard rules of thumb imply that our new energy price forecasts will lower global GDP by 0.3% and boost headline inflation by 0.5-0.6pp over the next year (with a smaller 0.1-0.2pp boost to core inflation). Following forecast changes in the US, Europe, Asia, LatAm, and CEEMEA, we now accordingly forecast 2.6% global growth (vs. 2.9% prior to the war) on an annual average basis and 2.9% headline inflation on a Q4/Q4 basis (vs. 2.3%).

The recent selloff in front end rates—Exhibit 1 shows that end-2026 policy rate pricing has increased notably in the UK (+63bp), Euro Area (+50bp), US (+40bp), Canada (+39bp), and Australia (+31bp) since the start of the war—signals an expectation that global central banks will be especially sensitive to higher inflation given the recent memory of post-pandemic supply disruptions and associated surge in inflation.

Exhibit 1: Front-End Rates Have Sold Off Since the Start of the War in Iran

Source: Goldman Sachs FICC and Equities, Goldman Sachs Global Investment Research

The size of the energy shock will likely prompt some caution, and we have accordingly delayed our forecast for cuts in several economies, including the US and UK. That said, the biggest policy risk from higher energy prices is that second-round inflation spillovers could lead to sustained upward pressure on underlying inflation, as occurred in 2021-2022. A key difference between 2021-2022 and today, however, is that today's shock is more narrowly concentrated in the energy sector, whereas the energy price increases in 2022 were only one aspect of a much broader global supply chain crisis and inflation surge.

In this *Global Economics Comment* we highlight three reasons why impacts on non-energy supply will likely be less severe.

First, most major economies have limited trade exposure to the Middle East. While some regional economies are highly exposed—our Middle Eastern economics team sees significant headwinds to regional growth—non-energy exports account for less than 1% of total imports for major DMs and EMs, and only 1% of total global trade. As a point of comparison, the post-pandemic shutdowns to China and East Asian trade affected over 20% of global trade, suggesting that supply chain disruptions from the war in Iran will be much more limited than those after the pandemic.

Exhibit 2: Outside of Regional Economies and India, Major DM and EM Economies Have Limited Trade Exposure to Non-Energy Goods

Source: UN Comtrade Database, Goldman Sachs Global Investment Research

Second, the production bottlenecks that emerged in 2021-2022 due to loss of supply of critical inputs and “just-in-time” inventory management seem less likely to repeat.

To identify key supply risks, in [Exhibit 3](#) we examine Middle Eastern export shares of HS4 trade categories to assess where chokepoints are likely to emerge. The takeaway from this calculation is that Middle Eastern exporters account for a large share of global exports for some chemical and metal products that would likely be the source of any production bottlenecks.

Exhibit 3: Gulf Exporters Account for a Large Share of Global Trade for Some Chemical and Metal Products

Source: UN Comtrade Database, Goldman Sachs Global Investment Research

[Exhibit 4](#) provides more context around potential bottlenecks. The left chart shows that Gulf states account for a large share of global production (in addition to the large shares

of trade shown in [Exhibit 3](#)) for several of these items. But the right chart shows that most of these highly exposed chemicals and metals account for at most 0.2% of global GDP, with Middle East production accounting for less than 0.02% of global GDP. In contrast, disruptions to global semiconductor production in 2022 affected trade worth around 1% of global GDP.

More importantly, these products do not appear likely to create shortages in “critical” inputs that would lead to broad production shutdowns. Sulfur, nitrogen, and ammonia are used as fertilizers, which increases agricultural productivity but is not essential and could be rationed. Most limestone flux is produced domestically, and polyethylene is mostly used for production of low value add (and generally not essential) plastics. We therefore anticipate limited production challenges from these items.

On the surface, helium would seem like the most likely candidate for potential supply disruptions given that it is a hard-to-substitute input into production of MRI machines, semiconductors, and aerospace systems. But conversations with our equity analysts suggest that contracts for helium supply are generally long-term and fixed, and several large producers have enough [helium stored](#) to offset potential supply disruptions for the foreseeable future.

The most likely candidate source for production disruption is therefore methanol, which is a key input into production of acetic acid, which is in turn used to produce many industrial adhesives, solvents, and paints. While we don’t see clear chokepoints for now, the potentially permanent loss of Iran’s almost 20% of global production capacity raises some risk of downstream ripple effects.

Exhibit 4: Gulf Countries Account for a Large Share of Global Production for Some Chemicals and Metals, but These Are Small as a Share of Global GDP

Source: Goldman Sachs Global Investment Research, Data compiled by Goldman Sachs Global Investment Research

Even if supply disruptions are not binding constraints on downstream production, the loss of supply is putting upward pressure on prices that could boost inflation. In [Exhibit 5](#) we assess these risks by combining price increases so far with input shares to estimate the impact on global inflation.

The key challenge in analyzing the inflation effect is that most affected commodities' prices are not quoted regularly. The left chart of [Exhibit 5](#) addresses this issue by compiling reported spot price increases for each product from available price indices and industry reports. The upshot of this exercise is that prices have increased by around

25% for the considered products.

The right chart of [Exhibit 5](#) combines these reported price increases with our estimates of global production (as a share of global GDP) to estimate the global inflation boost if consumers bear 70% of the cost. Our estimates suggest up to a 0.1pp boost to global headline inflation over the next 12 months if prices stay at current spot price levels, although the impact will be much smaller if spot prices normalize with supply following the reopening of the Strait of Hormuz.

Exhibit 5: Prices Have Increased Significantly for Highly Exposed Chemical and Metals, but the Impact on Inflation Appears Limited, even if Prices Remain at Current Levels

Source: Goldman Sachs Global Investment Research, Data compiled by Goldman Sachs Global Investment Research

Third, the problematic shipping disruptions from 2021-2022—where port bottlenecks made it difficult to obtain supply even after production had recovered, leading some companies with inadequate inventory buffers to cut production—appear less likely to repeat. There are two channels through which disrupted trade flows could impact supply and prices.

First, if the Middle East were a significant trade hub (that collected products and reallocated them to their destination), then a disruption in re-exports could lead to supply shortages. [Exhibit 6](#) shows that trade rerouting could negatively affect re-exports of yachts and other boats, but the impact on other goods appears limited.

Exhibit 6: Gulf Country Reexports Are Limited Outside of Yachts

Source: UN Comtrade Database, Goldman Sachs Global Investment Research

Second, a reshuffling of global supply could lead to upward pressure on shipping prices. For ocean freight—which accounts for 90% of global shipping volume—this does not appear to be an issue thus far, as shipping prices ticked down last week according to the Baltic Dry Freight Index. In contrast, airfreight prices have increased significantly due to Middle Eastern air traffic disruptions, with cost increases to and from Asia and North America/Europe increasing by an average of 25%. That said, these spot price increases point to only 3bp upside to global inflation (with smaller impacts if costs normalize from current levels).

Exhibit 7: Air Freight Prices Have Increased, but Ocean Shipping Costs Have Ticked Down

Source: Goldman Sachs Global Investment Research, Bloomberg, Data compiled by Goldman Sachs Global Investment Research

In summary, our analysis suggests that the major risk to global supply and inflation is mostly confined to energy, which limits the risk that the severe supply chain disruptions

(and associated surge in inflation) and large second-round inflation effects observed in 2021-2022 will re-emerge. This conclusion complements the findings from our European economics team that the economy is less exposed to energy shocks today than in 2022, although non-linear effects on energy cost passthrough and inflation expectations are possible if the energy crisis intensifies.

Disclosure Appendix

Reg AC

We, Joseph Briggs and Megan Peters, hereby certify that all of the views expressed in this report accurately reflect our personal views, which have not been influenced by considerations of the firm's business or client relationships.

Unless otherwise stated, the individuals listed on the cover page of this report are analysts in Goldman Sachs' Global Investment Research division.

Disclosures

Other disclosure

Iran is subject to comprehensive sanctions by the United States.

Regulatory disclosures

Disclosures required by United States laws and regulations

See company-specific regulatory disclosures above for any of the following disclosures required as to companies referred to in this report: manager or co-manager in a pending transaction; 1% or other ownership; compensation for certain services; types of client relationships; managed/co-managed public offerings in prior periods; directorships; for equity securities, market making and/or specialist role. Goldman Sachs trades or may trade as a principal in debt securities (or in related derivatives) of issuers discussed in this report.

The following are additional required disclosures: **Ownership and material conflicts of interest:** Goldman Sachs policy prohibits its analysts, professionals reporting to analysts and members of their households from owning securities of any company in the analyst's area of coverage. **Analyst compensation:** Analysts are paid in part based on the profitability of Goldman Sachs, which includes investment banking revenues. **Analyst as officer or director:** Goldman Sachs policy generally prohibits its analysts, persons reporting to analysts or members of their households from serving as an officer, director or advisor of any company in the analyst's area of coverage. **Non-U.S. Analysts:** Non-U.S. analysts may not be associated persons of Goldman Sachs & Co. LLC and therefore may not be subject to FINRA Rule 2241 or FINRA Rule 2242 restrictions on communications with a subject company, public appearances and trading in securities covered by the analysts.

Additional disclosures required under the laws and regulations of jurisdictions other than the United States

The following disclosures are those required by the jurisdiction indicated, except to the extent already made above pursuant to United States laws and regulations. **Australia:** Goldman Sachs Australia Pty Ltd and its affiliates are not authorised deposit-taking institutions (as that term is defined in the Banking Act 1959 (Cth)) in Australia and do not provide banking services, nor carry on a banking business, in Australia. This research, and any access to it, is intended only for "wholesale clients" within the meaning of the Australian Corporations Act, unless otherwise agreed by Goldman Sachs. In producing research reports, members of Global Investment Research of Goldman Sachs Australia may attend site visits and other meetings hosted by the companies and other entities which are the subject of its research reports. In some instances the costs of such site visits or meetings may be met in part or in whole by the issuers concerned if Goldman Sachs Australia considers it is appropriate and reasonable in the specific circumstances relating to the site visit or meeting. Goldman Sachs International has approved this research in connection with its distribution in the United Kingdom.

Goldman Sachs International ("GSI"), authorised by the Prudential Regulation Authority ("PRA") and regulated by the Financial Conduct Authority ("FCA") and the PRA, has approved this research in connection with its distribution in the United Kingdom.

European Economic Area: Goldman Sachs Bank Europe SE ("GSBE") is a credit institution incorporated in Germany and, within the Single Supervisory Mechanism, subject to direct prudential supervision by the European Central Bank and in other respects supervised by German Federal Financial Supervisory Authority (Bundesanstalt für Finanzdienstleistungsaufsicht, BaFin) and Deutsche Bundesbank and disseminates research within the European Economic Area.

General disclosures

This research is for our clients only. Other than disclosures relating to Goldman Sachs, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. The information, opinions, estimates and forecasts contained herein are as of the date hereof and are subject to change without prior notification. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgment.

Goldman Sachs conducts a global full-service, integrated investment banking, investment management, and brokerage business. We have investment banking and other business relationships with a substantial percentage of the companies covered by Global Investment Research. Goldman Sachs & Co. LLC, the United States broker dealer, is a member of SIPC (<https://www.sipc.org>).

Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and principal trading desks that reflect opinions that are contrary to the opinions expressed in this research. Our asset management area, principal trading desks and investing businesses may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

We and our affiliates, officers, directors, and employees will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research, unless otherwise prohibited by regulation or Goldman Sachs policy.

The views attributed to third party presenters at Goldman Sachs arranged conferences, including individuals from other parts of Goldman Sachs, do not necessarily reflect those of Global Investment Research and are not an official view of Goldman Sachs.

Any third party referenced herein, including any salespeople, traders and other professionals or members of their household, may have positions in the products mentioned that are inconsistent with the views expressed by analysts named in this report.

This research is focused on investment themes across markets, industries and sectors. It does not attempt to distinguish between the prospects or performance of, or provide analysis of, individual companies within any industry or sector we describe.

Any trading recommendation in this research relating to an equity or credit security or securities within an industry or sector is reflective of the investment theme being discussed and is not a recommendation of any such security in isolation.

This research is not an offer to sell or the solicitation of an offer to buy any security in any jurisdiction where such an offer or solicitation would be illegal. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

Certain transactions, including those involving futures, options, and other derivatives, give rise to substantial risk and are not suitable for all investors. Investors should review current options and futures disclosure documents which are available from Goldman Sachs sales representatives or at <https://www.theocc.com/about/publications/character-risks.jsp> and https://www.goldmansachs.com/disclosures/cftc_fcm_disclosures. Transaction costs may be significant in option strategies calling for multiple purchase and sales of options such as spreads. Supporting documentation will be supplied upon request.

Differing Levels of Service provided by Global Investment Research: The level and types of services provided to you by Goldman Sachs Global Investment Research may vary as compared to that provided to internal and other external clients of GS, depending on various factors including your individual preferences as to the frequency and manner of receiving communication, your risk profile and investment focus and perspective (e.g., marketwide, sector specific, long term, short term), the size and scope of your overall client relationship with GS, and legal and regulatory constraints.

As an example, certain clients may request to receive notifications when research on specific securities is published, and certain clients may request that specific data underlying analysts' fundamental analysis available on our internal client websites be delivered to them electronically through data feeds or otherwise. No change to an analyst's fundamental research views (e.g., ratings, price targets, or material changes to earnings estimates for equity securities), will be communicated to any client prior to inclusion of such information in a research report broadly disseminated through electronic publication to our internal client websites or through other means, as necessary, to all clients who are entitled to receive such reports.

All research reports are disseminated and available to all clients simultaneously through electronic publication to our internal client websites. Not all research content is redistributed to our clients or available to third-party aggregators, nor is Goldman Sachs responsible for the redistribution of our research by third party aggregators. For research, models or other data related to one or more securities, markets or asset classes (including related services) that may be available to you, please contact your GS representative or go to <https://research.gs.com>.

Disclosure information is also available at <https://www.gs.com/research/hedge.html> or from Research Compliance, 200 West Street, New York, NY 10282.
